BackBox received the highest satisfaction score in our category on G2

## Why Automation?

56%

report that the last time their company experienced a cybersecurity breach it was due to a known vulnerability being exploited

62%

say their leadership prioritizes spending on prevention over response

93%

are dissatisfied with their company's current approach to automation

OVER 20%

are confident in their ability to restore from backup within a few minutes

## Why BackBox?

BackBox reliably automates operational work so you have confidence in the outcomes and can focus on more forward-looking projects.

- ✓ **Security-Centric.** Enhance your network's cyber resilience with automated vulnerability remediation, one-click backups, and over 3,000 pre-built tasks for streamlined configuration compliance at scale.
- ✓ **Network First.** The BackBox Automation Builder lets network engineers create automations using familiar commands for over 180 vendors and thousands of devices, accessed via a REST API.
- ✓ **Automation as a Service.** Our automation team works with customers to quickly develop custom automations, eliminating the need for professional service engagements just to get started.
- ✓ **Easy to Use.** Easily customize automations without scripting. Access 3,000+ pre-built automations and enjoy robust RBAC for seamless client data segmentation.
